

LIVING WITH DIABETES: WHAT TO KNOW ABOUT CHRONIC WOUNDS AND RECURRENCE

Understand your risk, know the facts.

Like 25% of people over 65,
Dan is living with diabetes.

About a year ago, Dan
experienced a diabetic foot ulcer.

Knowing he is at risk for foot
ulcers, Dan checked his feet.

Dan discovered he had another
foot ulcer, so he sought
specialized care right away.

Dan went to the Wound Care
Center® where he was healed
before. His care team organized a
comprehensive treatment plan to
help Dan heal.

Because of the expertise
of the wound care team,
amputation was prevented.

30.3 Million
people in the U.S. live with diabetes.

1 IN 4
people with diabetes will
experience a foot ulcer.

40%
of people with a healed
diabetic foot ulcer
will develop a new
ulcer within a year.

15%
of diabetic foot ulcers
progress to amputation.

50%
of people will die within
5 years of amputation.

If you, like Dan, are living with diabetes, be sure to check your feet daily.
Those who have had an ulcer are likely to have one again.

If you or someone you know is experiencing a sore or ulcer, find a
Wound Care Center near you at www.Healogics.com
